Create new project

**Create blank project/repository**  
Create a blank project to house your files, plan your work, and collaborate on code, among other things.

**Create from template**  
Create a project pre-populated with the necessary files to get you started quickly.

**Import project/repository**  
Migrate your data from an external source like GitHub, Bitbucket, or another instance of GitLab.

**Run CI/CD for external repository**  
Connect your external repository to GitLab CI/CD.

You can also create a project from the command line. [Show command](#)

Description format

Visibility Level

☒ Private

Project access must be granted explicitly to each user. If this project is part of a group, access will be granted to members of the group.

☐ Public

The project can be accessed without any authentication.

☐ Initialize repository with a README

Allows you to immediately clone this project's repository. Skip this if you plan to push up an existing repository.
