Layer
   IL  - Integration Layer
   SL  - Service Layer
   DAL - Data Access Layer

Module: Employee
1. Model class
2. Repository
3. Service Interface
4. ServiceImpl
5. RestController

*) ResponseEntity<?> : Here ? is called as wild card character.
   DataType is decided based on code execution flow (runtime).

@Query : select
@Query + @Modifying = non-select

@Transaction - commit/rollback
*) Incase of our custom query , we must write this annotation at
   service manually, for other operations not required.

try{
 beginTx();
 updateEmailById()
 commit()
}catch(SQLException e) {
   rollback()
}

PUT - Full/most of the part update
```

PATCH- partial update
